

# *Make a* **Bee Bath**

## **The experience:**

Like all animals, bees need water to survive. Since pollen and nectar from flowers contain very little water, you can help bees stay hydrated with a bee bath. It's important to keep bees hydrated because we wouldn't have much food to eat without them!

## **Materials:**

- A shallow container, like a pot saucer
- Pebbles and shells
- Water

## **Directions:**

1. Fill the shallow container with pebbles and shells
2. Add water, but do not fully cover the pebbles and shells
3. Put your bee bath in a sunny spot in your yard and enjoy!
